

NEW Toddy Cold Brew Pro Series

Introducing the Toddy® Pro Series line of cold brewing equipment. This new, patented product line is designed to help you scale up your cold brew program. We've listened to your feedback and incorporated many small details to make large volume brewing simple, efficient and food safe.

FEATURES & BENEFITS:

- All metal parts are constructed from brewer's grade (304/CF8) stainless steel.
- The lid handle fits on the brewer handle for storage to keep the lid from being placed on any surfaces that may not be clean.
- The valve is easily removable, cleanable and utilizes a threadless connection with easily replaceable food grade gaskets.
- The system uses single use, compostable filters (rather than metal mesh screens that are prone to clogs).
- The internal filter platform is constructed from one solid piece of stainless steel and has no folds or pockets where liquids or coffee grounds could get trapped.

TPS10US - 10 Gallon
TPS20US - 20 Gallon
