

FELLOW

THE STAGG POUR OVER SYSTEM Stagg Drippers, Glasses, Filters, and Carafe

The Fellow Stagg X and XF Pour Over Drippers are the perfect dripper for the coffee pro or the beginner, with an easy-to-use ratio aid to ensure you get the use the right amount of coffee for each brew. These drippers feature a vacuum insulated body to maximise heat retention, with steep sides, and a unique hole pattern. With two sizes, you can brew a 600ml (XF) cup or a 300ml (X) cup. Pair your Stagg Dripper with the Fellow Stagg Glass Carafe or 2-pack of Tasting Glasses to complete the brewing bundle.

Features:

- Vacuum insulated for ultimate heat retention during your brew.
- Steep slope to increase coffee-to-water contact and boost extraction.
- No clog drainage hole and bumps.
- Ratio aid measures out 1-2 servings so you always know the right amount of coffee to add. Ratio aid also acts as a drip cup for when you're done brewing.

Specifications:

- Materials: Stainless steel body, silicone gasket.
- Capacity: 300ml
- 15 x paper filters included

STAGG ANATOMY

Double Wall

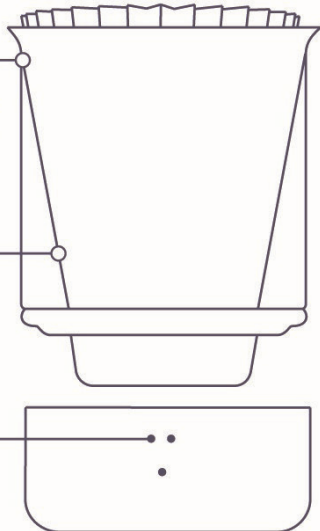

304 18/8 vacuum insulated stainless steel to maintain an even temperature while brewing. And because triple wall seemed like overkill.

Steep Slope

A steep slope increases the coffee to water surface area, resulting in a greater extraction. It's science.

Ratio Aid #1

Stagg [XF] Dripper's ratio aid helps you measure ~20 grams (single dot) or ~40 grams (double dots) of coffee before brewing. Bonus - use it as a drip cup after you're done brewing.

Ratio Aid #2

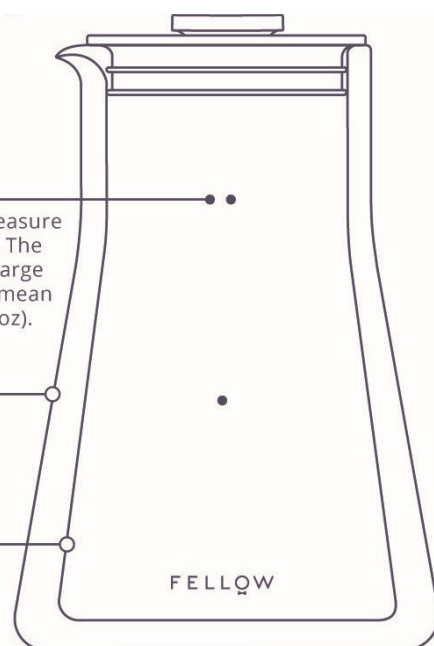

The carafe ratio aid helps you measure the perfect coffee-to-water ratio. The single dot means you've hit one large serving (10 oz). The double dots mean you've hit two large servings (20 oz).

Hand blown Glass

Our borosilicate carafe, the Arnold Schwarzenegger of glass, is hand blown.

Double Wall

Double wall to keep your coffee hot. The internal glass wall follows the outer wall because we don't like to waste space.
